EDUCATION

Boston University

Bachelor of Arts in Computer Science, Minor in Data Science, GPA: 3.6

Boston, MA

Sep. 2022 – May 2026

Roslyn High School

High School Graduate, SAT: 1550, ACT: 35

Roslyn Heights, NY

Sep. 2018 – Jun. 2022

EXPERIENCE

Course Assistant – Foundations of Data Science III

Boston University

January 2025 – Present

Boston, MA

- Facilitated student learning in advanced topics of probability, statistics, and data science, including Bayesian statistics, Markov models, and optimization techniques.
- Collaborated with the teaching team to maintain an inclusive and engaging learning environment.
- Conducted office hours to assist students with homework and clarify theoretical concepts such as the Central Limit Theorem, Maximum Likelihood Estimation, and Markov Chain Monte Carlo methods.

PROJECTS

Neural Network | *Python, NumPy*

- Designed and implemented a fully connected neural network from scratch in Python to classify handwritten digits from the MNIST dataset.
- Preprocessed and normalized input data to optimize training and model performance.
- Built a forward and backward propagation framework, including ReLU and softmax activation functions, and implemented gradient descent for parameter optimization.
- Achieved high classification accuracy by fine-tuning hyperparameters such as learning rate and number of epochs.

News Aggregator | *Python, HTML, CSS, Javascript, APIs, MongoDB, React.js, Flask*

- Worked with a small team to create a news aggregator that personalizes news articles based on location data and personal interests taken from past article views.
- Utilizes mongoDB for databasing, react for UI, flask for framework, and a news API and location API, as well as a multinomial Naive Bayes classifier to classify news articles based on their description into topics to be used for finding the user's interests and for future news to be displayed for the user.

Fake News Detector | *Python, Sci-Kit Learn, NumPy, NLTK, Pandas, Seaborn, Matplotlib*

- Designed a machine learning pipeline to classify news articles as real or fake using a dataset of over 23,000 articles.
- Conducted data preprocessing and exploratory data analysis, including frequency analysis and visualizations with libraries like Matplotlib and Seaborn.
- Implemented feature extraction using TF-IDF vectorization and trained classifiers including Naive Bayes and Logistic Regression, achieving measurable accuracy improvements.
- Evaluated model performance using metrics such as accuracy, confusion matrix, and classification reports to optimize prediction reliability.
- Utilized Python tools like Pandas, Numpy, and NLTK for data handling and natural language processing.

Portfolio Website | *React.js*

- Created a responsive website to showcase an introduction, projects, skills, and a functional contact me
- Utilized transformations and media queries to adjust for user display size and optimized for mobile devices

TECHNICAL SKILLS

Languages: Java, Python, SQL, Assembly, C, JavaScript, HTML, CSS, Swift

Frameworks: React, Node.js, Flask

Developer Tools: Git, VS Code, Visual Studio, PyCharm

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Sci-Kit Learn, NLTK
